

# UNWINDER

## DIFFERENT TYPES OF UNWINDERS TO FIT YOUR NEEDS

All our unwinders have a solid construction (robust, heavy duty) and can incorporate electric or pneumatic brakes. They are also provided with a motorized displacement system and mechanical or pneumatic expansion core drums.

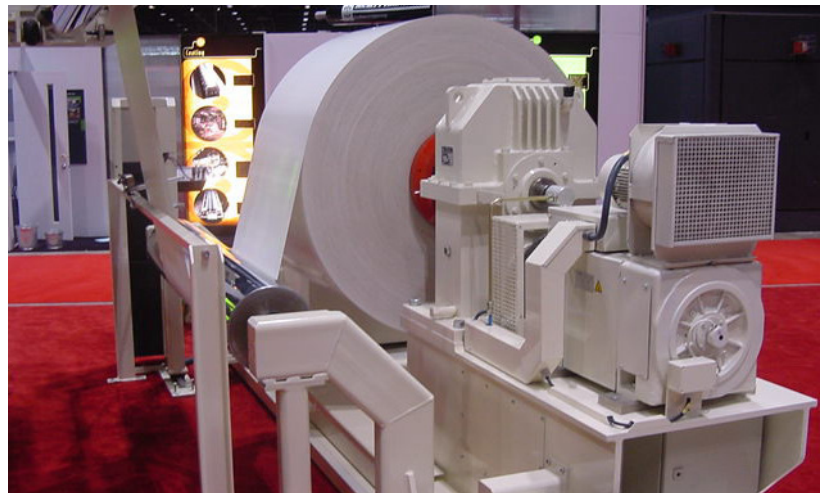

### PIVOTING

Based on arms installed on turnover shafts. Able to collect reels directly from the floor. They can be single or double and can incorporate a splicing system and process two reels simultaneously. The brake can be electric or pneumatic.

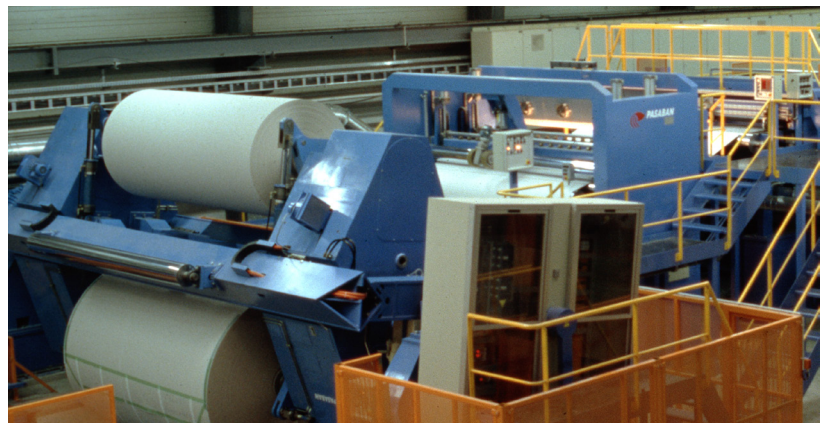

### VERTICAL

Unwinding by vertical stands resting on a steel mount. Reels are loaded with a lifting table. Electric or pneumatic brake. Monitored lateral displacement.

### ROTARY

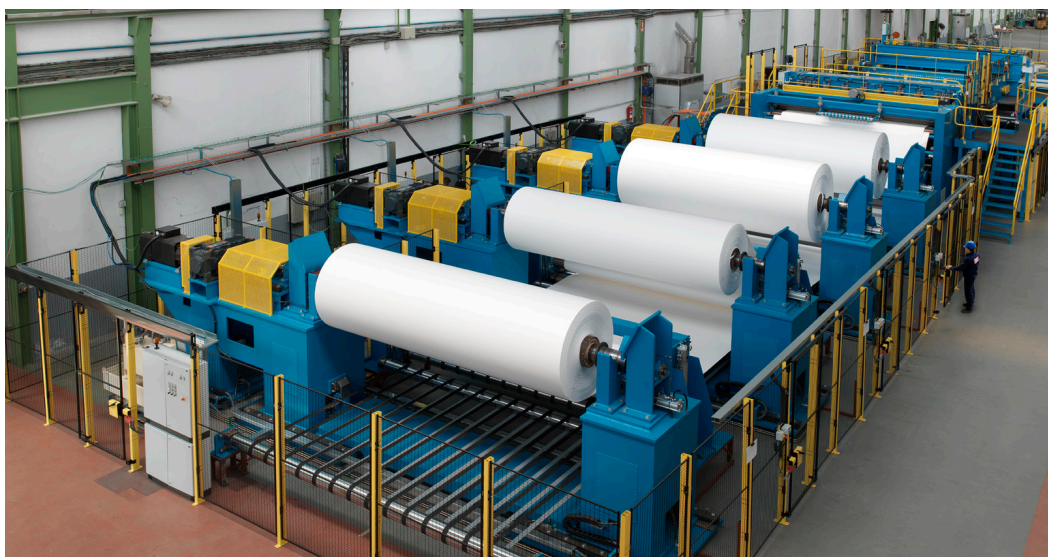

Machine that can take two reels provided with a central rotary shaft on which the two reel holder stands are installed. Provided with a system for maximum speed splicing on one or both sides. Available for several machines. Reel-loading lifting table and electric brake.

## FOR POPE ROLL

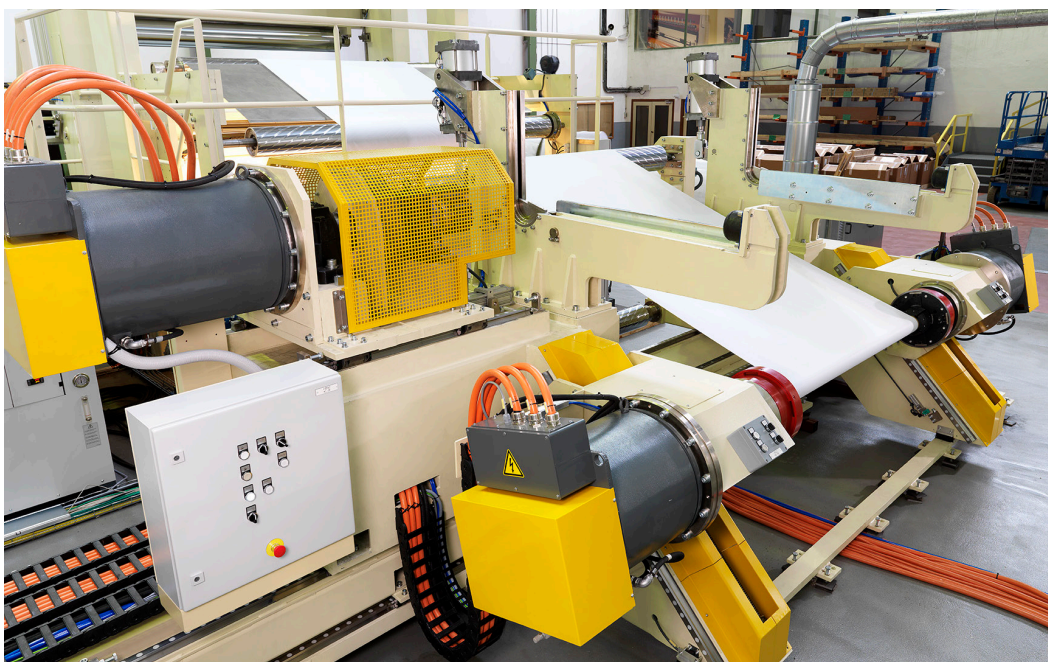

Ready to receive pope rolls directly from the production machines.

Allows splicing at maximum speed and can have an electric or pneumatic brake.

## INCLINED PLANE

Unwinder on mounts with inclined plane shape made of welded steel and resting on a shaft. Allows collecting reels from the floor. Electric or pneumatic brake.
